

Works notice

Stormwater re-use tank and tree plot installation

Swanston Street

Late July to mid-September 2024

As part of Metro Tunnel works, a stormwater re-use tank will be installed underneath the Swanston Street western footpath at the Flinders Quarter site frontage.

When we'll be working

- We'll be working from **Monday 22 July until mid September**
- **Monday to Friday 24 hours**
- **Saturdays 7am to 6pm**

The timing of work may change depending on weather.

What we'll be doing

Installing an underground stormwater re-use tank and tree plots within the closed section of the Swanston Street western footpath.

This will include the removal of existing bluestone pavers and asphalt surfaces, demolition of concrete, utility service relocations, excavation, paving, resurfacing and landscaping works.

What to be aware of

These works will include the use of demolition saws, non-destructive digging, an excavator with a hammer attachment, concrete pumps and other mobile plant.

These works will generate some periods of high-level noise and some vibration during the night.

Where

- Swanston Street western footpath and road between Flinders Street and Flinders Lane (where the footpath closure is currently in place).

We appreciate your patience while we undertake these works.

If you have any questions or concerns, please contact the Metro Tunnel Project information line on **1800 105 105**. Further information on Town Hall Station works can be found at metro tunnel.vic.gov.au

Did you know?

As part of these works we are using water sensitive urban design principles

All of the Metro Tunnel stations include infrastructure which will harvest and re-use rain and stormwater.

This will help reduce stormwater pollution from getting into our local stormwater network and the Yarra River, and provides a recycled water source for station services and amenities (e.g. toilet flushing). These systems will contribute significantly to achieving our potable water reduction targets.

At Town Hall Station, there will be two 100kL tanks that will store harvested rain and stormwater, and a water treatment plant that will treat the collected water so it can become a recycled water source for station operations.
