Land use and transport integration

Objective

To facilitate access to social, cultural and economic opportunities by effectively integrating land use and transport.

Strategies

Plan and develop a transport system that facilitates:

- Social and economic inclusion for all people and builds community wellbeing.
- The best use of existing social and economic infrastructure.
- A reduction in the distances people have to travel to access jobs and services.
- Better access to, and greater mobility within, local communities.
- Network-wide efficiency and coordinated operation.

Plan land use and development to:

- Protect existing transport infrastructure from encroachment or detriment that would impact on the current or future function of the asset.
- Protect transport infrastructure that is in delivery from encroachment or detriment that would impact on the construction or future function of the asset.
- Protect planned transport infrastructure from encroachment or detriment that would impact deliverability or future operation.
- Protect identified potential transport infrastructure from being precluded by land use and development.

Plan land use and development to allow for the ongoing improvement and development of the State Transport System in the short and long term.

Plan movement networks and adjoining land uses to minimise disruption to residential communities and their amenity.

Plan the timely delivery of transport infrastructure and services to support changing land use and associated transport demands.

Plan improvements to public transport, walking and cycling networks to coordinate with the ongoing development and redevelopment of urban areas.

Plan the use of land adjacent to the transport system having regard to the current and future development and operation of the transport system.

Reserve land for strategic transport infrastructure to ensure the transport system can be developed efficiently to meet changing transport demands.

Support urban development that makes jobs and services more accessible:

- In accordance with forecast demand.
- By taking advantage of all available modes of transport.

Protect existing and facilitate new walking and cycling access to public transport.

Locate major government and private sector investments in regional cities and centres on major transport corridors to maximise the access and mobility of communities.

Design neighbourhoods to:

- Better support active living.
- Increase the share of trips made using sustainable transport modes.
- Respond to the safety needs of all users.

BAYSIDE PLANNING SCHEME

Design the transport system and adjacent areas to achieve visual outcomes that are responsible to local context with particular reference to:

- Landscaping.
- The placement of signs.
- Providing buffer zones and resting places.

 G488bays Proposed GC246

Strategies

Concentrate land use and development that increases housing density, employment and visitation in accessible locations that offer the greatest access to public transport and facilitate walking and cycling.

Co-locate compatible land uses to reduce trip numbers and lengths, provide viable transport choice and encourage walking and cycling between activities.

Reduce car parking provision within the Cheltenham Suburban Rail Loop (SRL) East Structure Plan Area to encourage use of public and active transport.

Locate and design community facilities and improvements to open spaces so that they can be safely and conveniently accessed by public transport, walking and cycling.

Minimise potential conflict between all users of the transport system so that facilities introduced to benefit one category of user are not detrimental to the convenience, accessibility or safety of other users.

Encourage development to improves connections to the foreshore from public transport terminals.

18.01-2S09/12/2021
VC204**Transport system****Objective**

To facilitate the efficient, coordinated and reliable movement of people and goods by developing an integrated and efficient transport system.

Strategies

Plan and develop a transport system integrated across all movement networks that:

- Facilitates the efficient, coordinated and reliable movement of people and goods at all times.
- Optimises transport system capacity.
- Improves connectivity and facilitates the growth and development of regional Victoria.
- Improves connectivity between Victoria's regional cities and metropolitan Melbourne.
- Ensures sufficient capacity for the movement of passengers into and out of Victoria at Principal Transport Gateways.
- Improves how goods are moved to local, interstate and overseas markets.
- Maximises access to residential areas, employment, markets, services and recreation.
- Improves local transport options to support 20-minute neighbourhoods in Melbourne's suburbs and Victoria's regional cities and towns.
- Is legible and enables easy access and movement between modes.

Plan movement networks that share the same space to do so in a way that balances the needs of the different users of the transport system.

Plan and develop the State Transport System comprising the:

- Principal Bicycle Network: Existing and future high quality cycling routes that provide access to major destinations and facilitate cycling for transport, sport, recreation and fitness.
- Principal Public Transport Network: Existing and future high quality public transport routes in the Melbourne metropolitan area.
- Regional Rail Network: Existing and future passenger rail routes in regional Victoria.
- Principal Road Network: Declared arterial roads and freeways under the *Road Management Act 2004*.
- Principal Freight Network: Existing and future corridors and precincts where the movement of high volumes of freight are concentrated or of strategic value.
- Principal Transport Gateways: Existing and future ports, airports and interstate terminals that serve as key locations for moving passengers and freight into, out of and around Victoria.

Facilitate delivery of:

- Declared major transport projects and their ancillary projects that are of economic, social or environmental significance to the State of Victoria.
- Transport projects that improve the State Transport System.

State Transport System – Metropolitan Melbourne Plan

BAYSIDE PLANNING SCHEME

State Transport System – Regional Victoria Plan

18.01-3S09/12/2021
VC204**Sustainable and safe transport****Objective**

To facilitate an environmentally sustainable transport system that is safe and supports health and wellbeing.

Strategies

Plan and develop the transport system to:

- Maximise the efficient use of resources including infrastructure, land, services and energy.
- Prepare for and adapt to climate change impacts.
- Prioritise the use of sustainable personal transport.
- Protect, conserve and improve the natural environment by supporting forms of transport, energy use and transport technologies that have the least environmental impact.
- Avoid, minimise and offset harm to the environment by:
 - Protecting biodiversity.
 - Reducing transport-related greenhouse gas emissions.

Plan the transport system to be safe by:

- Developing safe transport infrastructure.
- Optimising accessibility, emergency access, service and amenity.
- Separating pedestrians, bicycles and motor vehicles, where practicable.
- Reducing the need for cyclists to mix with other road users.
- Supporting road users to make safe choices through design and wayfinding techniques.
- Prioritising transport safety when designing high-speed roads and intersections.

Support forms of transport and energy use that have the greatest benefit for, and least negative impact on, health and wellbeing.

Design the transport system to be accessible to all users.

Design new suburbs to respond to the safety, health and wellbeing needs of all road users.

Design development to promote walking, cycling and the use of public transport, in that order, and minimise car dependency.

Sustainable and safe transport - Metropolitan Melbourne

Strategies

Improve local travel options for walking and cycling to support 20 minute neighbourhoods.

18.01-3L

09/12/2021
VC204

Sustainable personal transport

Strategies

Design streets and development to not impede access for pedestrians and cyclists, or public and community transport.

Design development so that it does not remove or significantly lengthen pedestrian and cycling routes or access to public and community transport.

Prioritise pedestrian and cycling access to, through and within the development, including providing mid-block links through large development sites.

Provide for bicycle parking in activity centres and along the foreshore.

Link bicycle and walking routes to the Principal and Municipal Bicycle Network and Principal Pedestrian Network in a way that respects the existing local streetscape.

Locate and design walking and cycling routes to take into account environmental constraints such as flooding so that users are not at risk.

Connect open spaces and key community destinations to encourage walking and cycling.

Facilitate improvements to the bicycle network in the southern part of the municipality.
