

12. Appendices

Appendix A – Risk assessment

Appendix B – Tree assessment data

Appendix C – Tree location plans

Appendix D – Planned tree removals and potentially impacted trees by precinct

Appendix A – Risk assessment

Characterisation of consequence

Extent	Local Municipality Corridor Wider region	
Severity of impact	VERY HIGH	A very high degree of impact on an environmental asset, value or use of moderate or higher significance, or A very high number of impacts on environmental assets, values or uses, or Impacts on environmental assets, values or uses of very high significance
	HIGH	A high degree of impact on an environmental asset, value or use of moderate or higher significance, or A high number of impacts on environmental assets, values or uses, or Impacts on environmental assets, values or uses of high significance
	MEDIUM	A moderate degree of impact on an environmental asset, value or use of moderate or higher significance, or A moderate number of impacts on environmental assets, values or uses, or Impacts on environmental assets, values or uses of moderate significance
	LOW	A low degree of impact on an environmental asset, value or use, or A low number of impacts on environmental assets, values or uses, or Impacts on environmental assets, values or uses of lower significance
	VERY LOW	A very low degree of impact on an environmental asset, value or use, or A very low number of impacts on environmental assets, values or uses, or Impacts on environmental assets, values or uses of very low significance
Duration of threat	Short term construction (0 – 3 months) Medium term construction (>3 months – 2 years) Long term construction (>2 – 7 years) Permanent (7+ years)	

Likelihood criteria

Planned	The event is certain to occur
Almost certain	The event is almost certain to occur one or more times a year
Likely	The event is likely to occur several times within a five-year timeframe
Possible	The event may occur once within a five-year timeframe
Unlikely	The event may occur under unusual circumstances but is not expected (ie once within a 20-year timeframe)
Rare	The event is very unlikely to occur but may occur in exceptional circumstances (ie once within a 100-year timeframe)

Risk matrix

Likelihood	Consequence				
	Negligible	Minor	Moderate	Major	Severe
Rare	Very low	Very low	Low	Medium	Medium
Unlikely	Very low	Low	Low	Medium	High
Possible	Low	Low	Medium	High	High
Likely	Low	Medium	Medium	High	Very high
Almost certain	Low	Medium	High	Very high	Very high
Planned	Planned (negligible consequence)	Planned (minor consequence)	Planned (moderate consequence)	Planned (major consequence)	Planned (severe consequence)

Risk ID	Potential threat and effect on the environment	INITIAL RISK								RESIDUAL RISK							
		Initial EPR	Magnitude of consequence			Overall consequence	Likelihood	Risk level	Reasoning	Final EPR	Magnitude of consequence			Overall consequence	Likelihood	Risk level	Reasoning
			Extent	Severity	Duration						Extent	Severity	Duration				
CONSTRUCTION																	
AR01	Removal of trees for construction resulting in reduction of urban forest canopy cover	AR1 – Tree retention and arboricultural assessment	Corridor	High	7+ years	Major	Planned	Planned	- Clearance of trees unavoidable	AR1 – Tree retention and arboricultural assessment	Corridor	Medium	7+ years	Major	Planned	Planned	- Clearance of trees unavoidable
AR02	Damage to trees on periphery of construction leading to death, damage or destabilisation, including mechanical impacts from cranes, piling rigs and vehicular access resulting in damage to tree crowns; lopping of tree crowns for installation of temporary aerial services leading to damage to trees by poor pruning practices	AR2 – Tree Protection Plan	Local	Low	7+ years	Minor	Possible	Low	- with AS4970 in place (tree protection plans) protection of peripheral trees should be appropriately managed. Impacts are likely to be localised	AR2 – Tree Protection Plan	Local	Low	7+ years	Minor	Possible	Low	- Preparation and implementation of detailed tree management plans will limit the potential for damage to trees proposed to be retained adjacent to works
AR03	Modification to adjacent soil profiles resulting in droughting, waterlogging and/or deoxygenation of root zones leading to reduced tree health or death primarily due to construction access through parkland, including set down areas	AR2 – Tree Protection Plan	Local	Low	7+ years	Minor	Possible	Low	- with AS4970 in place (tree protection plans) protection of peripheral trees should be appropriately managed. Impacts are likely to be localised.	AR2 – Tree Protection Plan	Local	Low	7+ years	Minor	Possible	Low	- Preparation and implementation of detailed tree management plans will limit the potential for damage to trees proposed to be retained adjacent to works

Risk ID	Potential threat and effect on the environment	INITIAL RISK								RESIDUAL RISK

			Extent	Severity	Duration												
	resulting in soil compaction and reduced tree health.																
OPERATION																	
AR04	North East Link roads, bridges, tunnels and associated infrastructure would prevent the re-establishment of urban forest canopy within the vicinity of the project.	Replanting plan	Corridor	High	7+ years	Major	Likely	High	- New roads and structures will occupy a larger area currently occupied by soft landscape, limiting opportunities for tree re-establishment within road reserves.	AR3 – Tree Canopy Replacement Plan	Corridor	Low	7+ years	Moderate	Possible	Medium	- Expanding the scope of tree replantings, where required, should permit the re-establishment of overall canopy lost as a consequence of construction of the project
AR05	Modification to growing conditions by new structures, such as shading of new trees, wind modification and drawdown of groundwater resulting in poor growing conditions and reduction of urban forest canopy cover	Replanting plan	Local	Low	7+ years	Minor	Unlikely	Low	- Groundwater modifications occur deeper than anticipated zone of root growth for relatively young, planted trees.	AR3 – Tree Canopy Replacement Plan	Local	Low	7+ years	Minor	Unlikely	Low	- Groundwater modifications occur deeper than anticipated zone of root growth for relatively young, planted trees.
