Pen Nib

1846

	
Era	1846
Where	Site 1A
Material found in	Gravel
Total to be found	3
Rarity	Rare

This is an example of one of the first manufactured pen nibs. Before this, people would sharpen the end of large feather, a quill, and dip this in ink to use as a pen. The hollow shaft of the feather held some of the ink, allowing for more writing between ink dippings. The first factory produced pen nibs that were made of steel. A metal nib retains a sharp point or edge much longer than a quill which wears out quickly and requires skill to sharpen. Gold-plated nibs like this one were a luxury item. Gold is a soft metal and wears away more quickly than steel but it produces a much smoother writing action, making it easier and more pleasurable to use.

Ink Well

1840

	
Era	1840
Where	Site 1A
Material found in	Dirt
Total to be found	1
Rarity	Ultra Rare

This handsome glass ink well would have sat on the desk in an office or study and been used with a nibbed pen. Perhaps it belonged to someone whose work included writing many letters and reports? See how its unusual shape creates the perfect angle for dipping a pen. This ink well is both decorative and practical. Its flat sides and bottom make it a jar that won't topple or roll because no-one wants to deal with the business of spilt ink!

Writing Slate

1840

	
Era	1840
Where	Site 1A
Material found in	Dirt
Total to be found	9
Rarity	Common

Writing slates and slate pencils were a common part of everyday life in colonial Australia. Paper was scarce and expensive. The slate could be used for working out sums or learning to write and spell. Sometimes lines were etched on the slate as a guide for neater writing. The slate could be wiped clean with a damp piece of cloth or sponge. Once children had perfected their lettering on the slate, they were allowed to practise using pen nibs and ink.

Material found in	1 gold and not gold in sand, 1 gold and not gold in gravel
Total to be found	10 (2 with gold filling)
Rarity	Common

Yes, these really are human teeth. Unlike the baby teeth you lost as a child, they have been pulled out by the roots! We can see that these teeth are badly decayed and would have given their owners a lot of pain. There do seem to be a lot of teeth in this location. Keep digging, you might find one with a gold filling!

Medicine Bottle

1900

	
Era	1900
Where	Site 1B
Material found in	Dirt
Total to be found	5
Rarity	Rare

Small bottles like this were used for pain medicines. At this time, prescriptions were not strictly regulated and many strong, even dangerous, medicines were readily available - although none of them were properly tested to see if they actually worked. Most remedies from this era were alcohol-based, which might explain their popularity! The square sides and shape of the bottle served as a reminder that what was inside was for medical use only - and to keep it away from children. It also made the bottle easier to locate if you awoke in the dark and needed to find it quickly.

Dentures

1900

Where	Site 4A
Material found in	Ash (Black concrete powder)
Total to be found	10
Rarity	Common

Very few food items from this time have survived but we bet you'll dig up more than one biscuit here! The shape and design of this biscuit tells us that it was made in an English factory, Huntley and Palmer, which first opened in 1822. By 1900 Huntley and Palmer was the world's largest biscuit company. Once you have guessed the identity of this site, you'll learn how these biscuits came to be here and why their original designs, moulded into the dough, are as clear as the day they were made.

Marmalade Jar

1855-1890

Era	1855-1890
Where	Site 4A
Material found in	Dirt
Total to be found	5
Rarity	Rare

This jar of marmalade came all the way from Scotland. Janet Keiller and her son James started the first ever marmalade business in 1797. They modified a quince-based recipe, "marmalato", by using Seville oranges, including pieces of rind, to create marmalade. The peel was thought to aid digestion. By the late 19th Century, James Keiller and Son were shipping their products all over the world. Goods that came from Great Britain were often expensive and a bit of a treat. You wouldn't expect to find more than one jar of marmalade in a single home.

Spanish Tile

1930

Era	1930
Where	Site 4B
Material found in	Dirt
Total to be found	5
Rarity	Rare

This highly decorative Spanish tile was part of the wall frieze in a very smart establishment. In 1930, Melbourne's population was still quite small: 1 million people (4.5 million people live in Melbourne today, 2019). As a result there was not much choice or variety in the things that were being made locally. Many people were migrants from Europe. They liked to go out to places that reminded them of their "old world", so these imported Spanish tiles were just the thing.

The remains of this huge tree stump, deep underground, remind us what was on this site long before Europeans came to Melbourne in the 1830s. Close to the river and the sea, this area was once densely forested and many Indigenous Australians lived well on this land. The colonial settlers cut down these forests to make way for their growing city. Few trees of this age and size remain in Melbourne today.

Site 1A – Girls’ School

1838–1850

This was the site of Roxburgh Ladies’ Seminary, Melbourne’s first girls’ school.

The owner, Nichola Anne Cooke, sailed to Van Diemen’s Land (Tasmania) in August 1838 on the *Amelia Thompson*. She moved to Melbourne, where she taught the daughters of John Batman, who founded the European settlement. After losing her mother and three sisters when the ship *Yarra Yarra* sank in Bass Strait, Cooke set up a school in Roxburgh Cottage, a building she rented from John Batman. By May 1839 the school had 15 pupils. Two of John Batman’s daughters were boarders at her school.

After John Batman died in 1839, Nichola Cooke fought a legal battle to stay at Roxburgh Cottage and successfully argued that her school provided stability in the lives of Batman’s daughters. Her victory was remarkable given that at this time women didn’t even have the right to own property or vote.

Nichola Cooke overcame many difficulties to earn her living as a single woman in the new settlement. She went on to become one of the first women to own land in the Port Phillip

District. She continued to run Roxburgh Ladies’ Seminary until 1851 but eventually returned to Ireland, where she died in 1867.

Only the wealthiest families could afford to send their daughters to a private girls’ school. Most girls were educated at home and were set to work as servants or in the family business in their early teens. The girls of Roxburgh Ladies’ Seminary were not being educated for employment. Along with basic mathematics and home economics, lessons would have included needlework, music and dancing. These young women were expected to make good marriages and run a household with servants of their own.

Site 1B - Dentist

1900-1930

Dentist JJ Forster had a surgery at 11 Swanston Street from 1898 to the 1930s.

More than 1,000 teeth were uncovered during the archaeological dig, many with massive holes that represented years of pain.

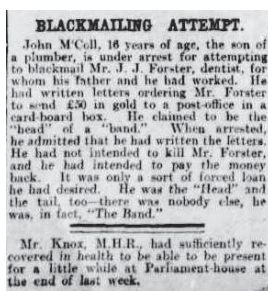

JJ Forster's advertisements said that he could remove teeth "truthfully without pain" but that almost certainly wasn't the case. In the early 1900s anaesthesia for tooth removal by lever or forceps might involve cocaine, novocaine or nitrous oxide. But these drugs were not as reliable or long-lasting as the lignocaine or articaine that are used today. There was also no paracetamol or ibuprofen for post-procedure pain and no antibiotics to fight infection.

In the days before fluoride was added to our water, people had far more tooth decay. The dentist would hollow out your cavity using a vibrating, pedal-driven drill. It would have been horrible.

Not surprisingly, most people only went to see a dentist as the very last resort. Some even chose to have all their teeth removed and replaced with a set of dentures rather than live with the misery of regular tooth pain.

JJ Forster was very wealthy and in 1909 he was the target of a high-profile blackmail case. He received letters demanding £50 under threat of death "by bullet or bomb". The police traced the threat to a 16-year-old boy, who planned to use the cash to buy a film projector and tour the country screening movies.

Site 2A - Hotel

1856-1910

There were pubs and hotels on this site from the very earliest days of the Melbourne settlement.

In 1859 the Freemasons' Hotel was one of these businesses. By the mid-1890s this site became the Gippsland Hotel.

In Australia, until recently (late 1980s), pubs were forced, by the liquor laws, to provide accommodation and so they are also known as hotels.

Colonial hotels served spirits like rum or brandy more than beer which requires preservatives to stay fresh. Small amounts of spirits were mixed with tonic or fizzy carbonated sodas to take away the strong taste and make a more palatable and refreshing drink.

Australian James Harrison was a pioneer of refrigeration but there was little chance of a cold drink until the introduction of electricity in the early part of the 20th Century. Before that ice was shipped to the colony from as far away as Boston in the United States.

An iceman would visit each premises and people would store their supply in thick ice chests.

Hotels in the 19th century were centres for entertainment, including: singalongs, gambling with dice and cards, climbing greasy poles, catching greased-up pigs, apple bobbing, boxing or bowling matches and in the rougher areas, a dogfight or cockfight.

Many women worked in pubs and hotels and some were even owners but they were not considered a "proper" place for a woman to be seen, especially if she wasn't with a man. Over time some hotels opened separate "ladies lounges" but in Australia, women were banned from entering a public bar until well into the 1970s.

Ray - Harper's Weekly, 30 August 1884

Site 2B - Chocolate Shop

1921-1935

Bates Chocolate Depot was once on this site.

Melbourne has a long tradition of independent confectionery makers including Bates, Allens and MacRobertson's. In 1930, the MacRobertson's chocolate company was looking to add a new product to its children's range. The original plan was to launch a mouse-shaped chocolate bar, but a young employee, Harry Melbourne, suggested that a frog would be better because women and children were afraid of mice. Freddo Frogs are still in production today. More than 90 million are sold in Australia each year alone!

The story of confectionery mirrors the history of manufacturing as a whole. At first sweet-making took place in the home, then it moved to bakeries and pastry shops. Next the manufacturing and retailing functions were separated as family-owned businesses grew and distributed their wares. In the 25 years to 1985, most of these family companies went into decline and were bought out by multinationals. Freddo Frogs became part of the Cadbury product range in 1967, when MacRobertson's were sold to Cadbury.

Sir Macpherson Robertson was perhaps Australia's greatest ever entrepreneur and philanthropist. He fought his way to the top of the confectionery industry, having started as a sugar-stirrer at age eleven. He founded MacRobertson's in his mother's bathroom in the 1880s. Products like Cherry Ripe (launched in 1924) and Freddo Frog made it a giant. Robertson was big self-promoter but he also gave a great deal of money and support to good causes. Among other things, he funded the explorer Mawson's Antarctic expeditions and a series of international air races. When he died, Robertson's estate was valued at almost £600,000 - that's equivalent to at least \$185,000,000 today (2019)!

Site 3A - Home

1850-1890

With all the noise and traffic along Swanston St today we can forget that, at one time, many families lived on top of or behind the businesses on Melbourne's busiest street.

These homes were small and cramped, it was not unusual to find five children sharing a bedroom - often they shared a bed.

Most homes didn't have a separate bathroom. Families would place a tin or copper tub in front of the fire and everyone would take it in turns to use the same water. Grown-ups went first!

Finding the lid from a Chinese teapot reminds us that not all of early Melbourne's colonial settlers came from Europe. News of the gold rush spread fast and many Chinese people arrived to try their luck on the goldfields. Shipping distances from China were half as long as those

from Europe and many Chinese immigrants soon discovered they could make a more reliable living using their business contacts to import supplies for the burgeoning colony. As a result Chinese pottery, silk and other decorative items became very fashionable in the latter part of the 19th century and were a major influence on art and design.

Site 3B - Printer

1890-1905

Hundreds of new and used lead type and printing plates, dating back to the late 19th century, were discovered at our city dig sites. These are the remains of the stationers and printers that previously called this area home.

Imagine if your next report had to be printed by placing individual metal letters one at a time into a frame - back to front! That's how early newspapers were produced. Printers would work long into the night "type setting" each page ready to be inked and then pressed onto single sheets of paper to form multiple copies of the next day's news.

At first the printing press was cranked by hand, then during the 19th century two ideas altered the design of the printing press entirely. First was the introduction of steam power to run the machinery. Second was the replacement of the printing flatbed with the faster rotary motion of cylinders.

Soon other inventions were added, such as cheaper paper made from wood pulp instead

of rags. Later in the 19th century the Linotype machine was invented. It sped up the process by squirting molten lead into lines of type ready to be printed. That's where we get the phrase, "hot off the presses".

Early newspapers had few very pictures. These had to be hand drawn and printed from individually moulded plates. Businesses would have their own printing plates made up for their labels, wrapping paper and advertisements. Plates for "Empire Soap" were uncovered on the city dig sites - linking them to one of the earliest and most prominent Melbourne candle and soap manufacturers, George Mowling & Sons.

Site 4A - Grocer

1850-1890

We know that grocers' stores operated on this site throughout the second half of the 19th century.

The colonial settlement was small, although it grew quickly once the Gold Rush started in 1852. Thousands of hopeful prospectors arrived in Melbourne, where they stopped to buy supplies before heading to the goldfields around Ballarat and Bendigo.

Most of the items to be found at the grocer would be familiar to us today. Food and consumables included coffee beans, spices, baking powder, oatmeal, flour, sugar, eggs, milk, butter, fruit and vegetables, honey and molasses, crackers, cheese, syrup, dried beans, cigars and tobacco.

Even so, many familiar items were scarce and new migrants missed the variety of foods they had enjoyed back home. There was money to be made from shipping these items to Australia to satisfy this demand. Many goods came from

Great Britain. They travelled by ship and could take more than three months to get to Australia. The biscuits and jars of marmalade are good examples of this.

The archaeologists found many biscuits on this site. They appear almost perfectly preserved. Historical records show there was a fire at John Connell's grocer shop in 1855. The biscuits were preserved by the heat of the blaze and stayed hidden underground in a layer of ash until they were discovered as part of the archaeological dig. The biscuits are now mostly charcoal and you would not want to eat one!

Site 4B - Restaurant

1910-1950s

This was the site of the Criterion Café, a well known restaurant in Melbourne.

In first half of the 20th century going out for dinner was a special occasion. Most people cooked and ate their food at home.

A visit to the Criterion Café would be an opportunity to dress up and young children would not be welcome. The food would be quite plain - soup, pork chops, and simple fish dishes - but people enjoyed the novelty of having food brought to their table. Often there was live music in the form of a pianist or string quartet and larger restaurants, like the Criterion Café, may even have had a dance floor.

It appears that at one time the Criterion Café building also had a cinema ("picture palace") but at first the movies were silent and in black and white. A pianist sat at the front of the cinema and played music to accompany the film. For one penny (1d) you could see two feature films but "dinner and a movie" didn't become a popular date night until the 1950s. Most people took their food to the movies with them or grabbed a bite to eat from a street stall afterwards.

The Criterion Café was owned by a colourful character, John Wren (1871 - 1953). After he died his estate valued the restaurant at £120,000 (equivalent to at least \$4,000,000 today, 2019).

John Wren was an Australian businessman and underworld figure. He was born in Collingwood, the third son of Irish immigrants and left school at the age of 12 to work in a wood-yard and as a "boot clicker", cutting the uppers for the shoes or boots from the sheet of leather. Soon Wren was making money from various gambling activities. He started a horse racing gambling business the "Collingwood Tote", which eventually earned him £20,000 per year, a fortune in those times. A self-made businessman, Wren had a hand in more than 30 businesses, some more successful than others. He was a practising Catholic and influential in politics. John Wren was not always a good man, but never forgot his poor origins and sought to improve conditions for working class people.

John Wren died of a heart attack shortly after his beloved Magpies (that's Collingwood Football Club) won the flag in 1953.

Item	Era	No.	Rarity
 Gold Bird Brooch	early 1900s	1	Ultra Rare
 Spanish Tile	1930	5	Rare
 Cutlery	1930-1940	10	Common

People dressed up and out for dinner (1944).

State Library of Victoria

1929 fashion drawing from Manton's Department Store.

State Library of Victoria

Film projector (circa 1940-49).

State Library of Victoria

Criterion Café owner, John Wren (1871-1953).

Australian War Memorial

Cesspit

1840 onwards

A cesspit was a place used to tip rubbish and waste water. They were also used as drop toilets.

It was a deep hole in the ground, sometimes lined with bricks and covered with a lid. Shared cesspits filled up quickly, got really smelly and needed to be cleaned out often. Archaeologists always make time to excavate cesspits because lots of interesting things end up there, including undigested bits of food.

Item	Era	No.	Rarity
Gold Sovereign	1879	1	Ultra Rare
Marbles	1850-1890	5	Rare
Fruit Seeds	Various	10	Common

The cesspit excavated in the archaeological dig.
