

SUSTAINABILITY POLICY

Through our delivery of Major Projects, we're committed to connecting communities sustainably. RPV will help to ensure a legacy for present and future generations for a more livable Victoria - environmentally, socially and economically.

To achieve this Sustainability Vision, Rail Projects Victoria is committed to:

- Contributing to Victoria achieving its greenhouse gas emission reduction targets;
- Using the latest science-based research to prepare for and respond to the challenges presented by climate change;
- Supporting Victoria's transition to a circular economy by managing resources efficiently and prioritising recycled materials; and
- Maintaining and striving to enhance biodiversity health, recognising its foundational role in social and economic wellbeing.

To give effect to this Policy, our people will:

- Drive industry leading outcomes across RPV's key sustainability focus areas of energy, materials, water management, livability and legacy and climate change resilience;
- Champion a collaborative approach to ensure integrated economic, social and environmentally sustainable outcomes;
- Drive sustainability outcomes by establishing a framework for setting objectives and targets for all RPV projects, across all RPV sustainability focus areas;
- Establish and implement practices to ensure compliance with applicable legislation, regulations, objectives and targets;
- Encourage innovation in sustainable design, construction and advocacy to promote new ideas and thinking;
- Drive sustainable outcomes across our supply chain through adopting sustainable procurement practices;
- Commit to providing our key stakeholders transparent reporting on our sustainability performance through RPV's Sustainability Annual Report; and
- Empower our staff with information, training and support to improve sustainability awareness and carbon and climate literacy.
