# Chatswood Transport Interchange

## Sydney

Image © 2015 Aerometrex

Chatswood Station was redeveloped to be Chatswood Transport Interchange with the construction of the Chatswood to Epping Line. The redeveloped station was raised to a viaduct level, allowing new road and pedestrian connections beneath the viaduct.

Chatswood Transport Interchange was developed with residential, retail and commercial buildings, above and adjacent to the station.

The project is an example of a rail over road grade separation and of transport associated development.
