Some environmental functions:

- Project strategy compliance audited every 6 months
- Construction Environmental Management Plan compliance audited every 3 months
- Worksite Environmental Management Plan compliance audited every month
- Operations Environmental Management Plan implemented upon completion of construction.

TRAFFIC MANAGEMENT

JULIEN MACLOU

TRANSURBAN

Traffic management requirements

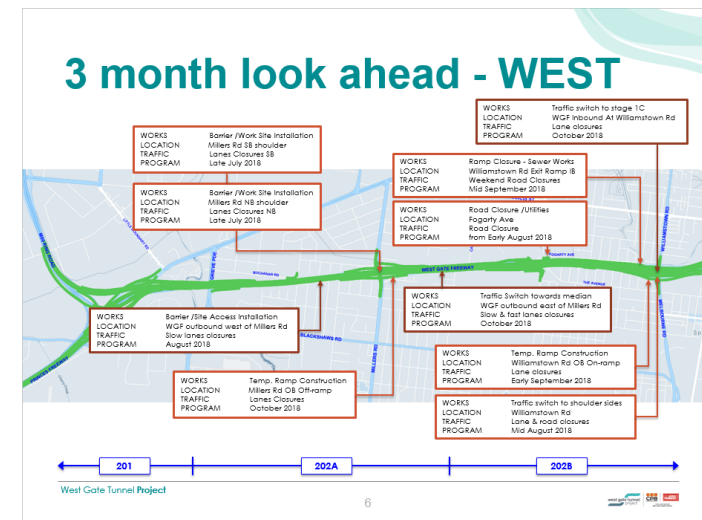

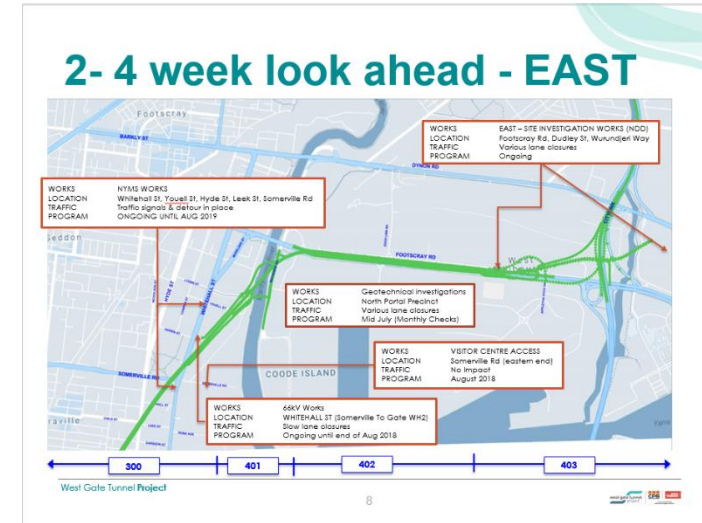

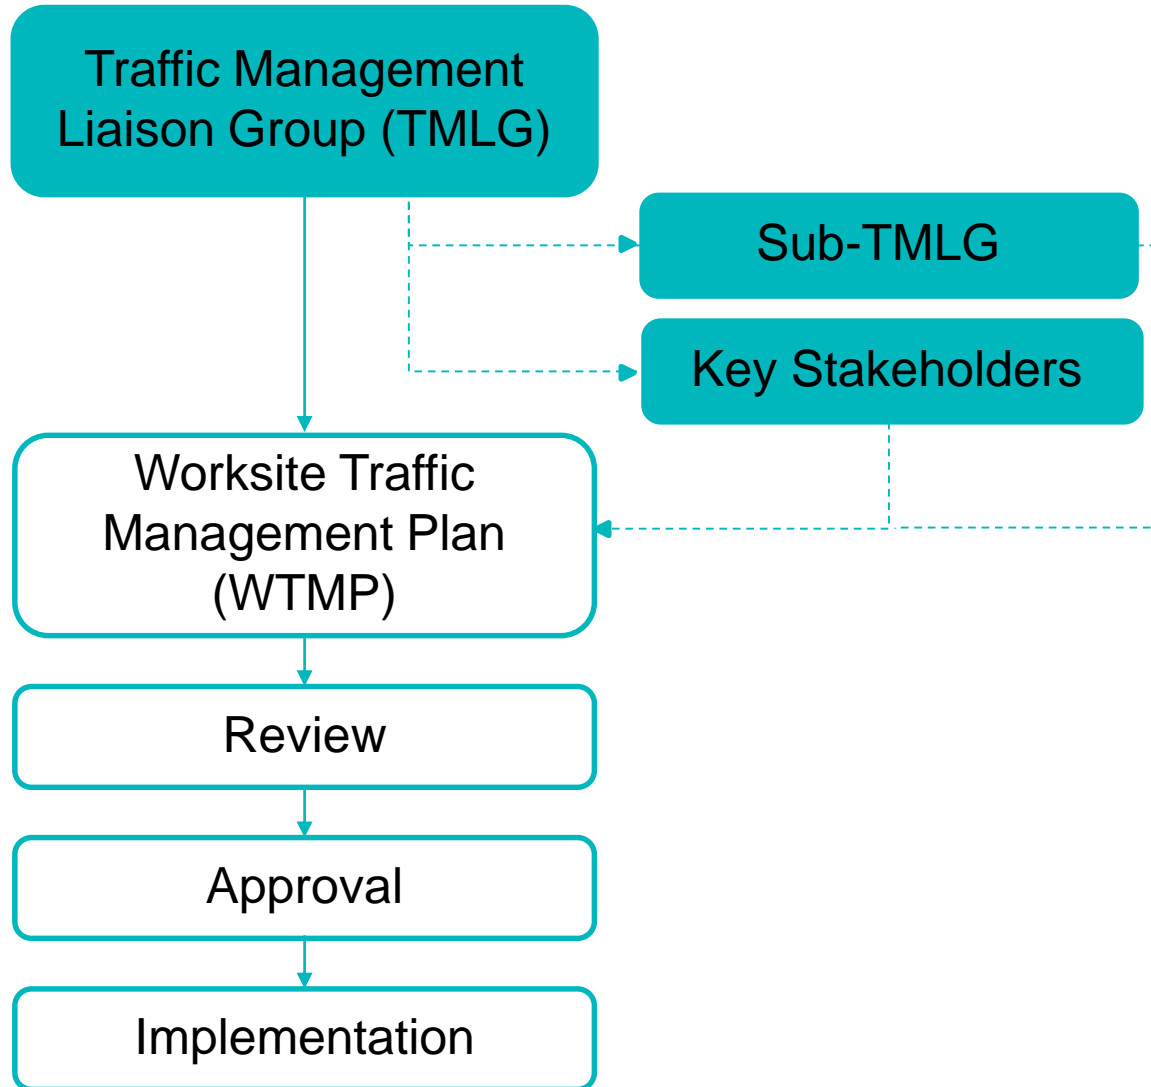

Environmental Performance Requirements – TP2, TP3 and TP7

- Develop and implement Traffic Management Plans (TMP) with measures to minimise disruptions
- TMPs must address a number of items including safety, traffic capacity, signage, timing, public transport and community and stakeholders
- Management of any temporary diversion of pedestrian or cycle paths to provide a safe, well-signposted alternative route and minimise impact on commuter travel times for cyclists as far as practicable
- Establish a Traffic Management Liaison Group (TP7)

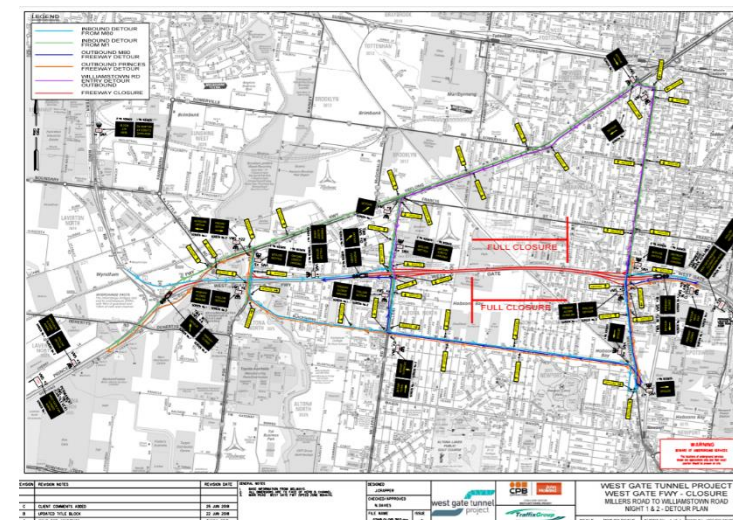

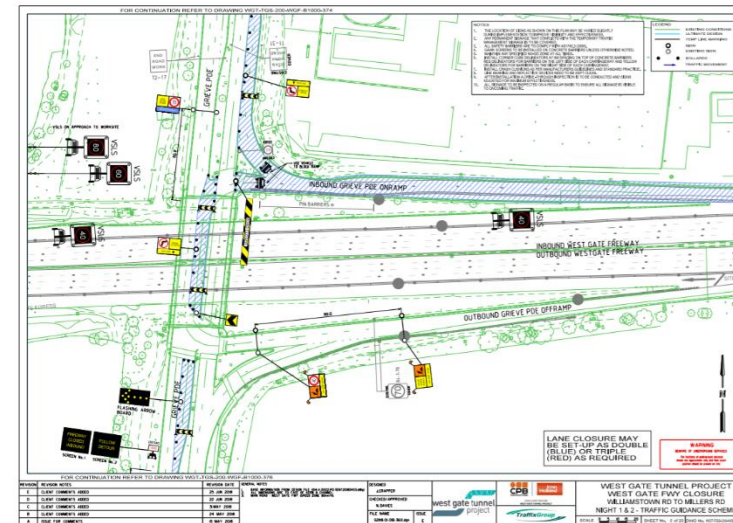

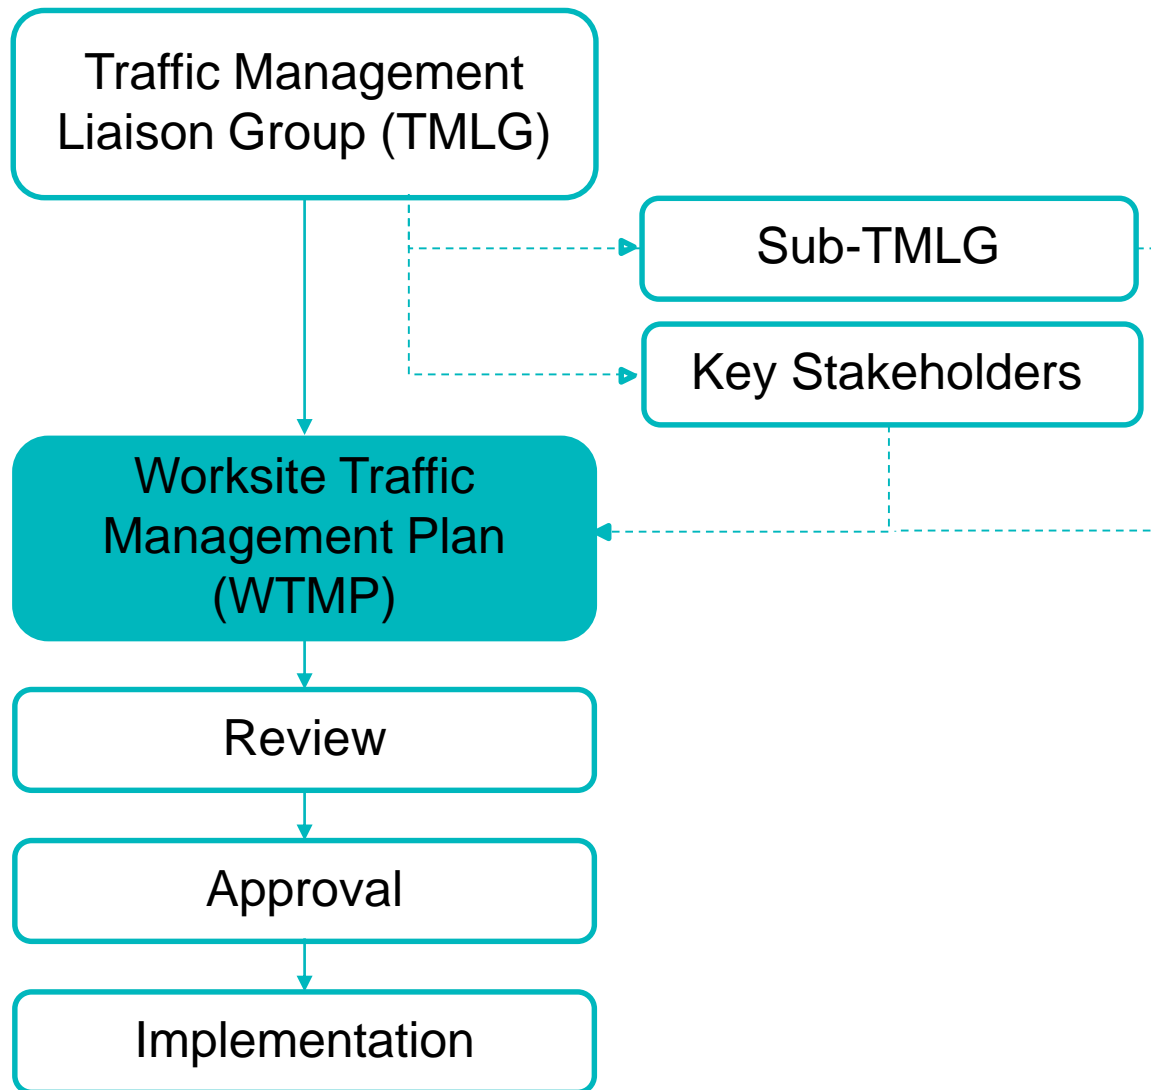

Traffic management – process

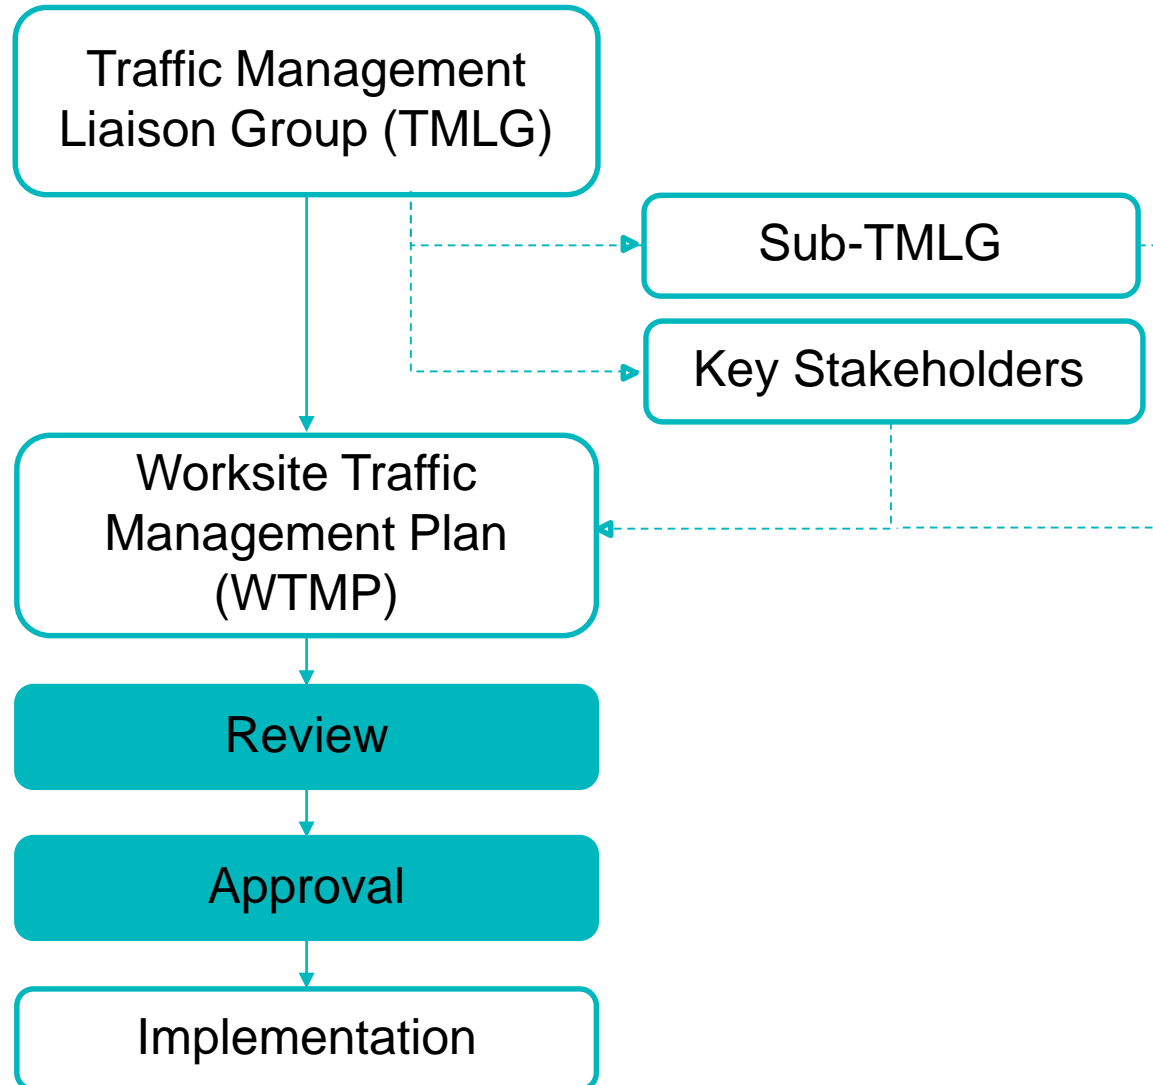

Traffic Management Liaison Group

Worksite Traffic Management Plans (WTMPs)

Development Process for WTMPs

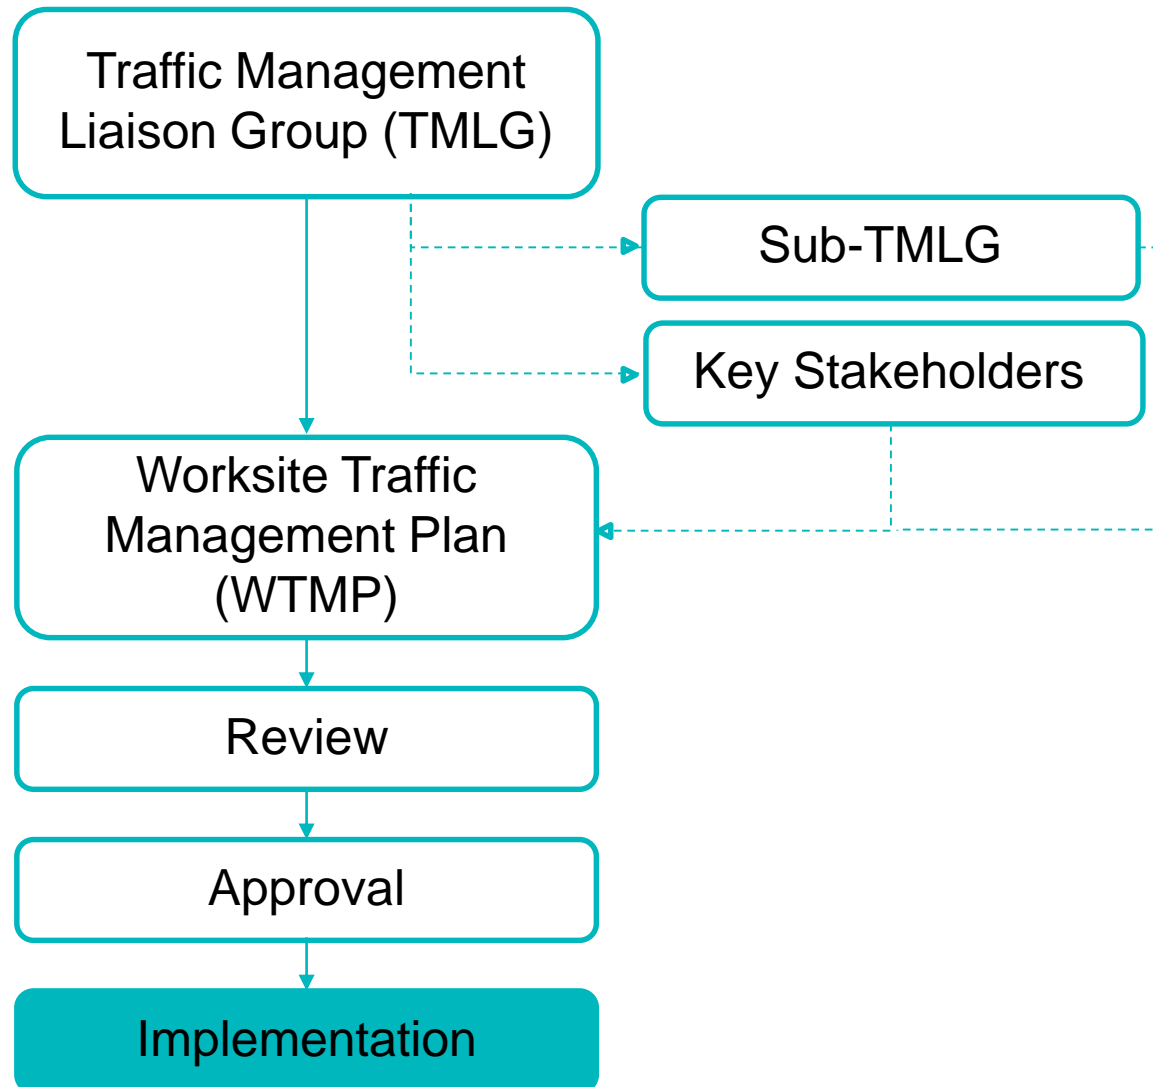

Worksite Traffic Management Plan

West Gate Tunnel

Title: West Gate Freeway – Full Closures
Document No: WGT-200-000-REP-CJH-750-TMP-1007

Development Process for WTMPs

New migrants (less than 52 weeks)	20-30	104
People who identify as Aboriginal or Torres Strait Islander	89-90	55
People living with disability	30-40	10
Graduates		75

Local business opportunities

Workforce trader directory has been launched to encourage staff to ‘buy local’.

Buying Australian goods and services:

- 93 percent of goods and services will be purchased from Australia/NZ suppliers, except for the specialist tunnel boring equipment
- A strategy will be developed and implemented to ensure that goods and services are sourced from social enterprises and Aboriginal businesses
- Our Local Industry Development Plan will set out all targets in design and construction of tunnels, roadworks, elevated structures and lane use management systems.
